**VISION
AND
MISSION**

GUIDING PURPOSE,
INSPIRING FUTURE.

> MISSION AND VISION <

VISION

- To be the national leader in all categories of Formula Student, to push the limits of engineering and compete in events at the highest level.
- To foster student mobility solutions in the future by developing sustainable prototypes across various domains.

MISSION

- Prepare students for the industry by designing and building world-class vehicles while facilitating industry interaction.
- Showcase India's engineering expertise in mobility on a global stage and provide talent opportunities for the industry.
- Develop cost-effective, sustainable transportation solutions for the masses.

**PRECISION
FORGED: THE
2025 UPRIGHT
REDEFINED**

PRECISION. STRENGTH. LEGACY IN
EVERY TURN.

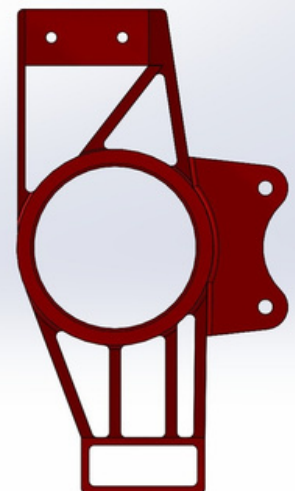

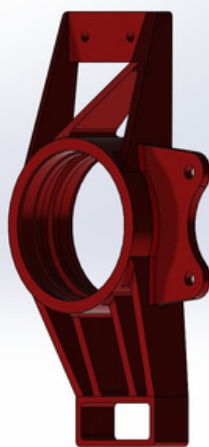

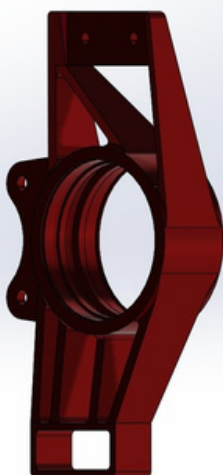

PRECISION FORGED: THE 2025 UPRIGHT REDEFINED

The upright designed for the upcoming race season is in the final stages of simulation and validation, making it one of our most refined components. The process began with a concept sketch focusing on suspension geometry and packaging constraints. After determining the load cases, we created a base CAD model and conducted finite element analysis (FEA). Topology optimization guided our decisions on material removal, keeping deformation within our 0.4 mm target.

Each design iteration was backed by simulation data, followed by clearance checks within the full suspension assembly. The part is designed to be machined from 7075-T6 aluminum, selected for its 503 MPa yield strength and ability to handle high loads while minimizing weight.

This year, we concentrated on streamlining the workflow and improving on past successes. The final result is an upright that maintains our desired strength and reliability while advancing simulation-driven optimization and design intent.

*-Gaurav Raju
Chief Engineer*

ALUMNI CORNER

CONNECTING MEMORIES,
BUILDING FUTURES!

ALUMNI CORNER

Goutham SG, Electrical, 2020 batch

Q: What was a defining moment during your time at Ashwa that really challenged you as an engineer?

It had to be the experience at Formula Bharat 2020. We managed to clear TI more or less smoothly but things began to change at the brake test, where our BSPD circuit started acting up. Our wheels weren't locking but soon the inspector realized our engine got killed before the wheels locked & found that our BSPD was not functional and hence stripped our noise test sticker. As a result we lost a day in sorting this mess and couldn't attend dynamics as we had to redo noise & clear brakes which we eventually managed. The final day we managed to also complete the endurance and were elated but this was short-lived as in the post endurance inspection we found that our BOTs latching circuit was not meeting a certain edge condition due to the specific design of the circuit & this resulted in us getting disqualified. I just realized an entire team's effort over a season just came down to one edge case in a safety circuit failing, which made me realize that's how unfair life is sometimes but you just have to learn from your mistakes & move forward without much regret.

Q: Can you share a project or responsibility at Ashwa that helped you discover or strengthen a specific technical skill you still use today?

The Formula Electric was one project that helped me build a lot of character. It was in its nascent stage during our time & most of the systems & processes had to be built from scratch. Our batch was instrumental in the design, selection & procurement of the cells, motor & controllers for the first prototype. But shortly after COVID hit bring everything to a stand still. Since then I have mostly helped the incoming batches with knowledge transfer as we occasionally visiting the workshop to track progress, understand the challenges they face & advising them with the experience I had

Q: How did being part of Ashwa's team culture, working across subsystems, managing timelines, or handling pressure, prepare you for your current professional environment?

I'd sum up my learnings as GDPR - grit, determination, perseverance & resilience. Most things in life will ever go your way, it's very important to show up everyday regardless of what it was like yesterday or how you're feeling today. This was evident for our team right through the days where we assembled our car in the workshop while juggling college & internals as well as the competitions we attended skipping exams where most things didn't go our way but we had to keep our head down and focus on what mattered the most.

SUPPORT**

A TOKEN OF THANKS TO OUR
SPONSORS

DYNAMATICS

DYNAMATIC TECHNOLOGIES

DYNAMATIC TECHNOLOGIES LIMITED designs and builds highly engineered products for Automotive, Aeronautic, Hydraulic and Security applications. With futuristic design, engineering and manufacturing facilities in Europe and India, they are able to meet customers' exacting requirements on 6 continents.

Their facilities which are located in India (Bangalore, Chennai, Coimbatore, Nasik), United Kingdom (Swindon, Bristol) and Germany (Schwarzenberg), are lean, green and clean, and designed to support neighbouring communities as well as the environment.

With three design laboratories in India and Europe, Dynamatic Technologies is a leading Private R&D Organisation, with numerous inventions and patents to its credit. The Company and its Subsidiaries employ around 50 scientists and 500 engineers with expertise in Mechanical Engineering, Advanced Computer Aided Engineering, Materials & Metallurgical Engineering, Fluid Dynamics and Defence & Aerospace Research.

Dynamatic Technologies is vertically integrated, with its own alloy-making and casting capabilities as well as its own captive green energy sources.
