**VISION
AND
MISSION**

GUIDING PURPOSE,
INSPIRING FUTURE.

> MISSION AND VISION <

VISION

- To be the national leader in all categories of Formula Student, to push the limits of engineering and compete in events at the highest level.
- To foster student mobility solutions in the future by developing sustainable prototypes across various domains.

MISSION

- Prepare students for the industry by designing and building world-class vehicles while facilitating industry interaction.
- Showcase India's engineering expertise in mobility on a global stage and provide talent opportunities for the industry.

**THE JOURNEY
OF FORMULA
BHARAT 2026**

RESILIENCE AND
UNITY.

RESILIENCE AND UNITY: ASHWA RACING AT FORMULA BHARAT 2026

The Annual Formula Bharat 2026 event is a true test of engineering skill, preparation, and team spirit. It serves as a powerful platform to inculcate various skills, reinforcing Ashwa's strong foundation and proving our unwavering commitment to engineering excellence. Thus from the 20th January to 25th of January, Kari Motor Speedway in Coimbatore is what we called home. We participated with our latest combustion prototype, the XX6-C running the class-leading GSX-R600 Engine.

Here's a chronicle of our experiences at the 10th anniversary edition of the event.

DAY 0: THE PIVOT

The day began with Team registration and Driver's registration. Soon after came the unexpected task of rewelding the front suspension assembly. With no time to waste, the team quickly **pivoted** to ensure the final assembly of the car was completed successfully for the crucial Technical Inspection (TI). This dedicated effort ensured the car was race-ready and reflected the team's resolve.

Team heading towards Registration Venue

DAY 1: IMPROVISE. ADAPT. OVERCOME.

With the team members registration also complete it was time to head for the day's first event, the Engineering Design Presentation. However we faced a major setback when a transportation delay left our car arriving 15 minutes late on the event site for the presentation. Nonetheless, the presenting team **adapted** to the situation at hand and delivered, showcasing our strong technical foundation. Post lunch it was time for the Business Plan Presentation finals, where we fared well.

However, the challenges persisted during pre-technical inspection, where our race suits and fire extinguishers initially failed clearance. It was a surprise as everyone expected a smooth clearance. It was time to **improvise**. Through team co-ordination and Arion Racing's generosity in lending us a race suit, we cleared pre-technical inspection by the end of Day

These hurdles highlight the ease with which even major details and checks can be overlooked, but the team's coordinated response **overcame** all challenges to achieve competition goals.

A sincere thank you to Arion Racing for acting in good spirit, showcasing both collaboration and corroboration.

DAY 2: PERSISTENCE IS KEY

The day started off on a beautiful note, the Panoramic Event saw all the meticulously engineered cars line up highlighting the art of motorsport.

Stills from the Panoramic Event

Then came Mechanical TI with one gargantuan task consuming the entire day - rectifying the seven points issued. The team wasted no time, their focused and **persistent** effort was on full display as they worked tirelessly to address every detail. Despite rejoining the queue at the very end and the day concluding before their next turn, the immense progress made was a testament to their engineering competency and collective drive to succeed. That made it worthwhile.

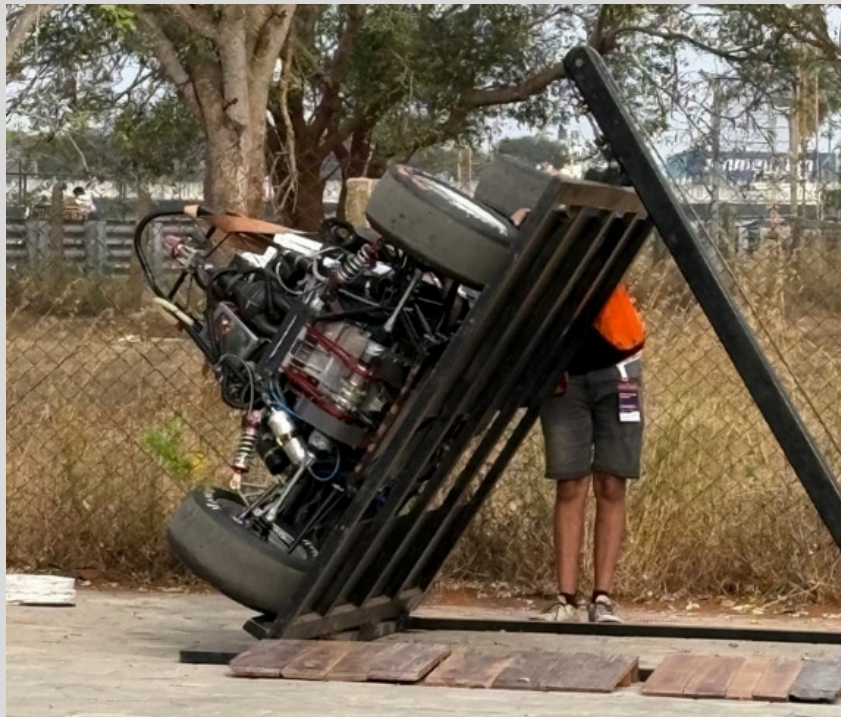

Team members working tirelessly to rectify the seven points

DAY 3: TRIUMPH AND TECHNICAL RESOLUTION

The team demonstrated remarkable efficiency by immediately clearing all previous technical points within 30 minutes on their second attempt. When a new point was raised concerning compressed gas cylinders exceeding the regulated 10 bar limit, the team acted decisively. Through a quick third attempt, they successfully rerouted the pneumatics and explained various failsafes. We finally cleared it and received that bright, orange Mechanical TI Sticker.

XX6C at the Tilt Test

This day also saw the Egress, Tilt, and Noise tests, with the Tilt test cleared flawlessly on the first attempt with no leaks. While Egress and Noise presented temporary issues, the team's agility in problem-solving allowed them to return and pass both immediately after making necessary adjustments. We would like to thank **Mr Vishruth**, whose mentorship guided us through that day.

XX6C receiving it's Noise Test Compliance Sticker

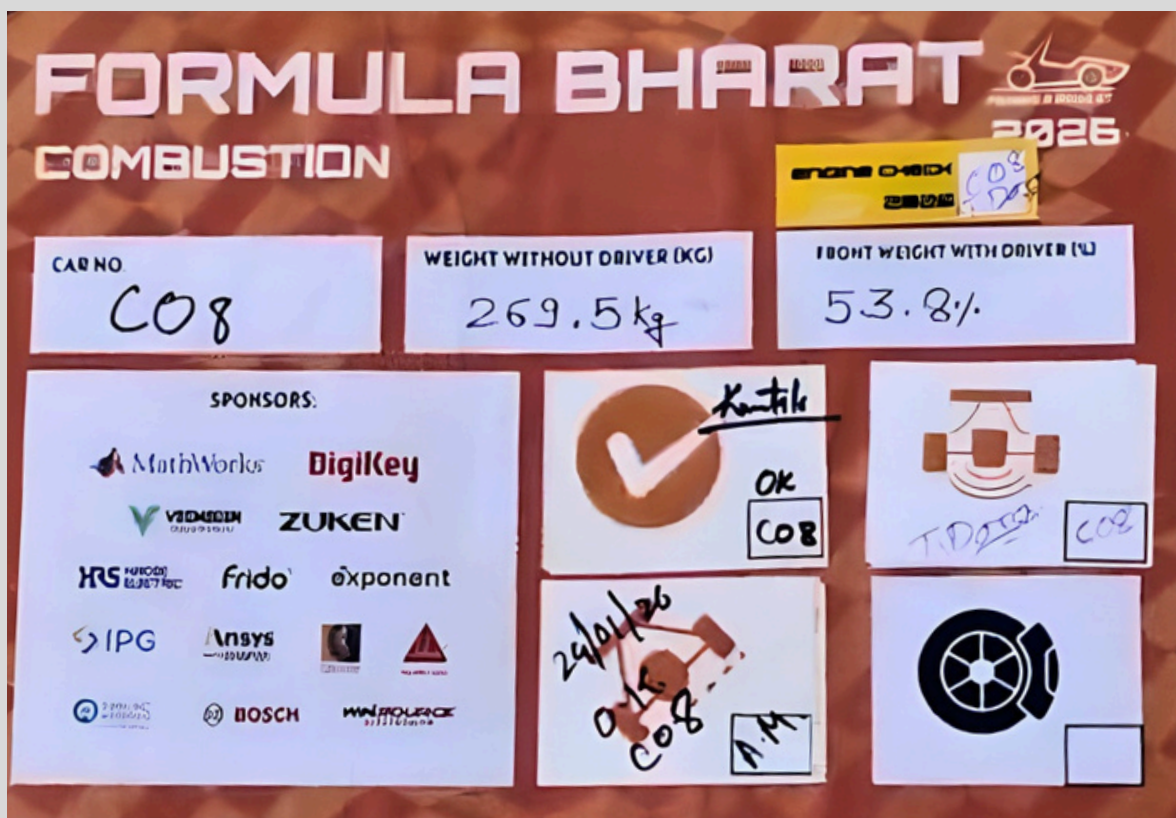

DAY 4: DETERMINATION TO SOLVING PROBLEMS

Going into the penultimate day, the Team was under the impression it would be smooth sailing. After they had cleared the Tilt Test and resolved majority of the points brought up during sound. However, it was far from east. The team had to stay back in the Noise Bay and demonstrated relentless **determination** until they successfully addressed the inspector's concerns, finally passing the Noise Test. Sometimes, a strategic timeout can make all the difference.

Then came the Brakes Test, proving to be even more challenging due to a drained battery and an issue with a tyre refusing to lock up, among others. The team was fully committed to sorting every issue; multiple attempts were made using different drivers. However, the efforts went in vain because just when we had everything in place, the clock struck 6 PM. We were out of time, and today was the last day we could clear the tests to be eligible for the Dynamic Events.

Hence, our competition came to a bitter end. Sometimes, despite the best efforts, things don't work out. We may have fallen this time, but Ashwa is **determined** to keep learning and developing so that we can come back again next year, reflecting our true dedication to Engineering.

Despite not being able to participate in Dynamic Events, we successfully completed our Mechanical TI

DAY 5: COASTING

With our participation in the events over, it was time for the time to take it easy and unwind a little. Group photos and videos were taken to capture a glimpse of the excitement, serving as a souvenir to take home and look back upon to cherish the great memories made. Networking is a crucial skill that any engineering team must master, and we didn't miss the opportunity to interact with companies and other teams at the event. The highlight of the day was taking a group photo with all teams from our home state of Karnataka.

Team Ashwa Racing and Team Chimera Racing - representing RV College of Engineering

This concludes our experience at Formula Bharat 2026. We learnt a lot through this experience, from our own mistakes, from various other teams as well as from mentors and experts present at the event. A sense of gratitude filled each member's heart as they travelled back home from another powerful experience.

"The strong team bonding was our secret weapon throughout the competition, and it reflected in every difficult situation we faced. When everything else was testing us, the spirit of unity and commitment to one another ensured we adapted, resolved, and persevered. This collective effort is what defines our success moving forward." - Project Manager, Anshul Joshi

**REACHING NEW
HEIGHTS
TOGETHER**

ADANI
X
ASHWA RACING

ADANI X ASHWA RACING: REACHING NEW HEIGHTS TOGETHER

“Universities must push the boundaries of research and corporates must push the boundaries of execution. Together, we must create impact, not just in markets but in the very fabric of our own Indian society” - Gautam Adani

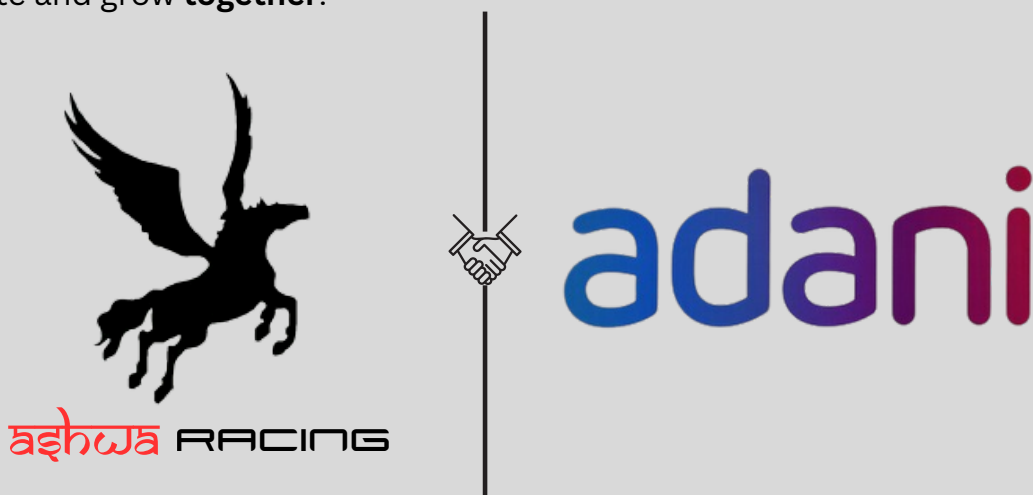

Adani sowed its seeds back in 1978, when Gautam Adani began as a humble diamond sorter. It took him a decade to finally set up Adani Exports in 1988, which dealt in agricultural commodities and power in Ahmedabad, Gujarat. The company established itself in the years to follow, eventually enlisting onto both the BSE and NSE as Adani Enterprises Ltd. The company's growth transformed the small village of Mundra into a major port, expanded into power, natural resource management, and even FMCG. Adani didn't stop there though.

Key acquisitions, new ventures, and a renewed brand have marked the last decade. With the expansion of their renewable energy capacity, leading in power and port operations and making significant infrastructure investments, the Adani group is set out for future advancements.

Adani's humble beginnings, how it stepped foot into a new and unknown field with a vision to transform India, is something that hits home for us. We share the passion for change, that passion to do something extraordinary and put ourselves up there in the big leagues. We want to make a mark, not for ourselves but for the people who put their trust and belief into us, **for India**.

Hence when we got the opportunity to onboard the Adani Group as our **executive sponsor**, we were delighted and honoured.

We would like to express our gratitude and thank the Adani Group for their support. We are proud to have partnered with you and hope to continue this partnership long into the future. Great minds may think alike, but the best collaborate and grow **together**.

**OUR FIRST
STEP TO
GREATNESS**

BOSCH
X
ASHWA RACING

BOSCH X ASHWA RACING: OUR FIRST STEP TO GREATNESS

It's always been about the first steps for Bosch. The step into independence, onto the automotive market, into markets outside Germany, and onto the factory floor of major manufacturing.

1886 was the very first step, Mr. Robert Bosch's workshop for Precision Mechanics and Electrical Engineering in Stuttgart. 1898 - Bosch takes its first step abroad in London. Then Bosch Offices opened up in South Africa (1906), Australia (1907), Argentina (1908), China (1909) and Japan (1911). The Second World War hit hard though, but that didn't stop them from bouncing back even stronger - their associates shot up from 15,000 to 70,000 in the decade after and by 1978, Bosch was the lead in Automotive Electronics. Another first step, this time into telecommunications and started making tech for space satellites, cell phones and implementing public and private networks. As the Iron Curtain came down, Bosch took its first step into the opportunistic Asian markets. These first steps built Bosch into the organisation it is today, a global supplier of technology and services employing 412,000 associates across sectors like Mobility, Industrial Technology, Consumer Goods, and Energy and Building Technology.

Bosch serves as testimony that for every big plan, to be the leader at the very top, driving the markets and being a catalyst for change, all begins with that very first step. It doesn't need to be big or small, good or bad, but just that first step is all it takes. We see a reflection of ourselves. It was 2003 when Ashwa Racing took its first step. First Indian team at Australasia in 2005, first team to use 600cc engine in a competition dominated by lower capacity engines. This brings us to where we are today, the opportunity to onboard Bosch as our **executive sponsor**.

Thank you, Bosch, for your support and reminding us about those crucial **first steps**. We are proud to partner up with you and to grow together, step by step.

**THE EV
ASSEMBLY**

HIGH VOLTAGE, NOW LIVE

THE EV ASSEMBLY

January marked the commencement of the powertrain assembly, a milestone transitioning the team from digital validation to physical integration. The workshop has been transformed into a dedicated assembly floor as we bring the core of our electric prototype to life.

Accumulator

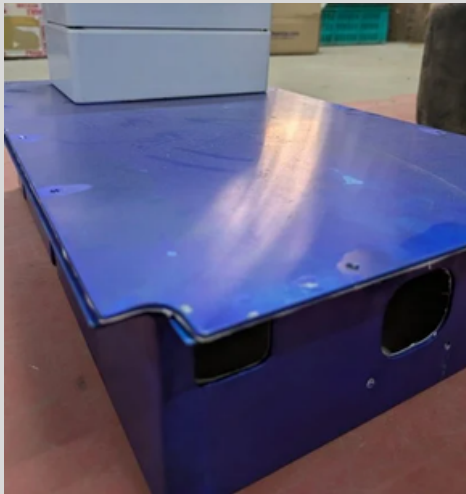

The accumulator is the vital energy reservoir of our vehicle. This month marked the successful disassembly of the previous ETV accumulator modules, transitioning toward the new, optimised architecture designed for a max voltage of 252V.

The segment assembly started with the manufacturing of segment polycarbonate structures. The modules were integrated into the polycarbonate structure, secured via high-conductivity busbars to establish electrical continuity. The Accumulator Management System (AMS) slave boards were mounted on top of the accumulator segments. Required cell taps and temperature harnesses were made and connected to the AMS slave boards.

The progress was further strengthened by the assembly of the accumulator mezzanine. This involved the integration of the Accumulator Management System (AMS) Master board, Precharge and Tractive system status indicator (TSSI) board, Isolation monitoring device (IMD), Accumulator Isolation Relays (AIRs), and the primary fuse. Harness wiring was done to facilitate connectivity among these critical components inside the accumulator and to facilitate signal and power transmission outside the accumulator, establishing the interface for the vehicle's power distribution and safety systems.

Motor Controller

The assembly of the new motor controller, designed for a single-motor configuration, began with the manufacturing of the aluminium enclosure and the validation of the liquid-cooled cold plate. This plate was engineered to manage the thermal loads of the IGBTs. Once the enclosure was anodised for surface durability, the IGBTs were installed by mounting them directly within the housing onto the cold plate surface.

Motor Controller Enclosure - Indigenously Designed and Fabricated at the Workshop

LV Enclosure Assembly

From powering components, controlling the car, maintaining safety, to data acquisition, the Low Voltage (LV) system is an integral part of the car. The LV enclosure houses the LV system boards that ensure the car is reliable and safe.

The assembly of the LV enclosure involved mounting the Power Distribution Board, Vehicle Control Unit, Brake System Plausibility Device (BSPD), CAN watchdog and Rear I/O onto a polycarbonate structure.

The Power Distribution Board is used to distribute and monitor power drawn by various boards throughout the car.

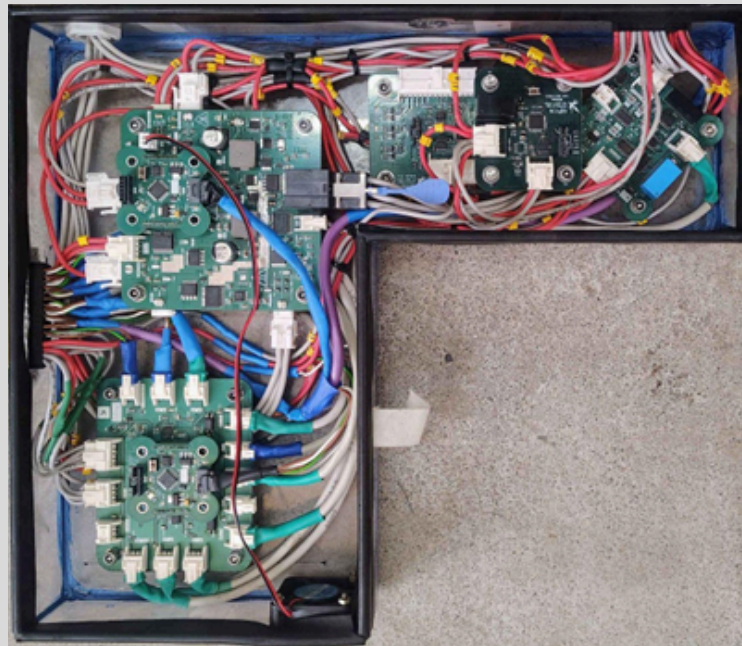

The BSPD shuts down the car if the brakes and accelerator are pressed hard together simultaneously.

CAN watchdog checks for errors in the CAN bus transmission.

The Vehicle Control Unit sends the torque value to the motor controller based on throttle position.

The harnessing focused on establishing a network of signal and power paths between boards and to external systems to ensure reliable data propagation and electrical continuity across the vehicle's control modules.

To ensure environmental protection and electrical isolation, a specialised sealant was applied ,and rubber insulation was installed between the top plate and the LV enclosure contacts.

LV Enclosure - For Supporting the Car's Core Control and Safety Functions
